Sprint 2

Product Owner: Sakshyam
Scrum Master: Brody
Development Team: Arpit, Brody, Michael, Sakshyam, Vasilis, Yong

Features implemented: Several rudimentary user interfaces, save/load schedule functionality, hashmap holding building coordinates. Other implementation features are currently in progress. Also conducted focus group meeting, updated platform document, and completed focus group document.

Issues fixed: Original hashmap mapping buildings to street addresses was ineffective. Locations were not accurate enough for walking directions. Hashmap was changed to map to coordinates instead.

What went well in implementation: Implementation tasks were fairly delegated between team members and most members made solid progress on their respective tasks.

What problems occurred: Several team members had issues with Android Studio working properly on their computers. Some unfamiliarity with git/github is still present.

How problems were solved: Android Studio problems on team devices were worked out during scrum meeting. Implementation difficulties and code confusion was also worked through as a team.

Changes made: Still working on the first implementation of the app. No previous version to change.

What will be done for the next sprint: Finish work from sprint 2 for first implementation. Complete GRL & UCM Models, Domain Model & Detailed Design Model, and Configuration Management Plan documents. Update SRS & Use Case Models document.

What went well in Scrum: Scrum meeting attendance was much better than for Sprint 1. Team member are becoming more comfortable with the processes.

What could be improved in Scrum: Communication could be improved. Email has not been overly reliable for this purpose.

What changes will be made in Scrum: No role changes for Sprint 3. Roles will be rotated after Sprint 3 for next deliverable.
